

Solar Charging Cable

20A MC4 to XT60

Accessory

The Link Between Panel and Station.

20A	MC4	XT60	12 mo
Rated Current	Panel End	Station End	Warranty

Why You Need It

Two Different Plugs

BLUETTI's foldable panels end in MC4. The Apex 300 and Elite stations take solar in through XT60. The two do not join without this cable.

Plug and Play

Keyed connectors that seat one way, hand tight. No tools and no wiring. Panel to cable, cable to station, and the station starts taking solar.

CABLE

Rated Current	20A
Panel-Side Connector	Standard MC4
Station-Side Connector	XT60

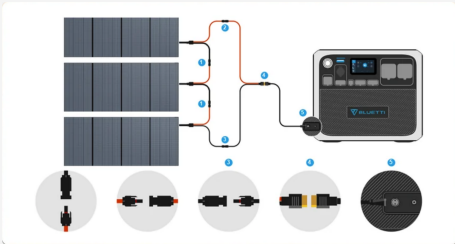

GENERAL

Installation	No tools needed
Pairs With	BLUETTI MC4 panels
Warranty	12 Months

Which Stations It Fits

BLUETTI lists this cable for the **Apex 300**, **Elite 100 V2**, **Elite 200 V2**, **Elite 300**, and **Elite 400**. Other stations use different solar inputs, so check the port before pairing.

It works with either foldable panel we carry, since both end in standard MC4.

Panel MC4 to cable to station XT60

Also Available • Foldable Solar Panels

The **350W PV350** and the **200W SP200L** both connect through this cable.

Confirm the solar input port and its voltage and wattage limits on your station before connecting. This cable carries solar input only and is not an AC charging cable.
